

Press Release

2008.04.15

1st International AVIATION CO₂ Conference

September 8-10, 2008 Budapest, Hungary

The 1st **AVIATION CO₂** conference will be held on September 8-10, 2008 in Budapest, Hungary. The event will address the most current policy and technology related issues in the aviation industry, and aims to focus on significant solutions of Sustainable Transport.

In spite of continuous technological development, aviation remains a substantial contributor to climate change through different emissions. Although the aviation industry is not covered by the Kyoto Protocol, certain restrictive measures are expected to be introduced in the future.

The increasing demand for mobility is the driving engine of continuous development and capacity improvement. In the forthcoming years an unprecedented need will dominate for technical development and the introduction of new technologies.

Growing concern for the environment requires more attention from both equipment suppliers and airlines. The measurable harmful effect of greenhouse gas emissions on our climate is forcing us to change our consuming habits and to mitigate pollution.

Conference participants are expected from international organizations, the European Commission, Government agencies, major airlines and aerospace manufacturers. The key objectives are dissemination and promotion of good practices in aviation with a special attention on climate, energy and environment related issues.

The **AVIATION CO₂** conference is about to set an example for a constructive dialogue between governments, policy makers and business. It will give you and your colleagues an opportunity to let others know what you have already achieved and to actively initiate and participate in discussions and to raise issues concerning your business.
